

Popcorn Popper Operating Instructions

Preparation: Install the machine in a level position. Plug into a standard 110 outlet. Use only one pre-measured bag of popcorn at a time. **DO NOT OVERFILL THE KETTLE.**

1. Start with the kettle in the horizontal position. Turn on switches for heating and stirring, as well as the keep-warm light.
2. Snip the top of the bag of popcorn and oil...and pour all of it into the kettle. (if using your own product, add six ounces of popcorn and 4 ounces of oil)
3. Close lid on kettle (it's magnetic and needs to be brought down). **DO NOT OPEN WHILE CORN IS POPPING.**
4. Listen to the popping sounds and when it slows down, empty the kettle by turning the handle clockwise. Don't try to pop every kernel or it will burn. Dump the kettle as you've seen done at the movie theater.
5. Repeat cycle. Turn kettle off when it is not operation. **REMEMBER, KETTLE IS HOT!**
